XDR 3.2.11 Program Change Highlights

Version 3.2.11 (May 8th, 2017)
• Added default sharpening options and measuring for all grayscale images captured by XDR from an intraoral or pan/ceph source.
• Added 3 customizable image sharpening treatments (This may cause a slight variance from sharpening in previous versions.)
• Updated Fast Image to prevent loss of unsaved or restored images should user exit Fast Image without saving.
• Added enhancements to the Perio and Caries/Endo filters.
• Added ability to the Switch Monitor feature to be able to move between more than just 2 monitors.
